Veradia Offers Free Vein Health Screenings

FOR IMMEDIATE RELEASE

Veradia Vein Center is offering a free community vein screening at their clinic, (6001 S. Sharon, Suite 5) Tuesday, February 1st from 4p.m. to 7 p.m. This is an opportunity to increase public awareness of venous disease and identify treatment options available.

Many people know the impact of heart disease or diabetes, but few people are aware of the seriousness of major venous diseases. Blood clots in leg veins kill more than 100,000 Americans each year. Diseases of the veins also can cause other serious conditions, including varicose veins, chronic leg swelling and leg ulcers. Even fewer know that vein health can be evaluated quickly and easily in a doctor's office. Our screenings are designed to assess venous insufficiency and the total health of the leg veins.

The free vein health screenings consists of three simple steps: completion of a brief demographic questionnaire; assessment of venous thromboembolism risk; lower extremity examination for signs of chronic venous insufficiency. At the completion of the screening, people will receive detailed educational materials on vein health.

About Veradia Vein Center

Veradia specializes in treating varicose and spider veins through minimally invasive treatments that allow patients to experience little pain, minimal down time and a successful recovery.
